**ALTERNATIVE ENERGY SYSTEM IS A HIT AT ALTRINCHAM'S
BUDENBERG HAUS PROJECKTE**

When Urban Splash Sales Negotiator Paul Marshall needed a temporary home for his parents, sister and himself before moving into a new house, he naturally put faith into his "own product." and rented an Urban Splash apartment at the Budenberg Haus Projekte in Altrincham. But the family of four were also attracted by other features including low cost utility bills, eco-friendly power and a fully wired up information system including internet and TV, all supplied through an alternative energy system provided by EcoCentroGen.

EcoCentroGen, a leading specialist in funding and providing alternative energy & data systems, has funded an energy centre, which provides eco-friendly low emissions power for the development. The energy centre acts as the "power hub" for the apartments and produces heat, electricity and state-of the-art data services including digital television, telephony and high speed broadband. Living in an apartment with an EcoCentroGen energy system means that because of the way energy is sourced, residents pay one consolidated bill for utilities, offering 10 per cent savings compared with conventional energy bills.

For 20-year-old Paul and his family, advantages of living in a living in apartment with an EcoCentroGen energy centre have been enormous. He said: "When you look for an apartment obviously you look at things like location and convenience, but living here allows you to save money on your bills whilst "doing your bit" for the environment at the same time. "

In particular, the busy family have appreciated the limitless hot water supply, which is provided through the use heat of heat exchangers

Paul said: "There is always hot water when you want it. It's really good when there are four of you in an apartment; you're getting ready to go out at the same time and you all want showers. The other good thing is that this system means you don't need to have a boiler in the home and therefore you don't lose vital storage space."

The family has also enjoyed the benefits of the data services provided through the system which include 100 digital TV and radio channels, 1 or 2Mb broadband connectivity, TV based web browsing and e-mail, video door entry and a 24 hour help desk, serviced by EcoCentroGen and accessible by telephone & e mail.

Paul said: "In terms of ease, it's great - you've got everything, there's cable TV, internet which you can view through the TV and you can also view lots of extra information including TV guides, local services and your bills. The best thing is that if you want to speak to anyone about your services, there is someone on hand 24 hours a day. The people at EcoCentroGen have always been very professional and helpful, all you need to do is press a couple of buttons."

For more information about EcoCentroGen contact Peter Walker or Mark Chadwick on 0207 396 5562 or visit www.ecocentrogen.com.
